AVL Zollner PS1. 3211AF. 900kW. Max rpm 5500. Max Torque 5750Nm.

Overview of overhauled.

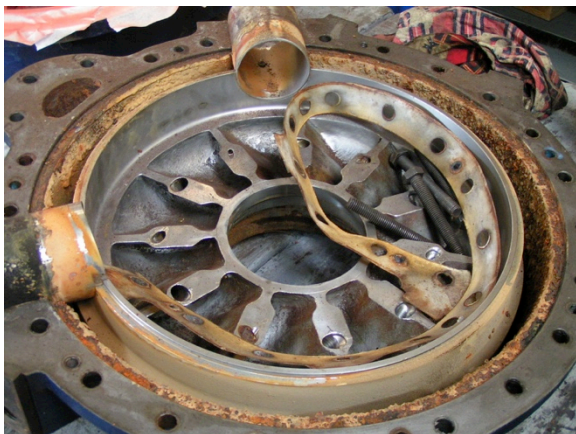

On arrival at our workshops the machine appeared to be in reasonable condition. We had no history of the dynamometer before the complete overhaul.

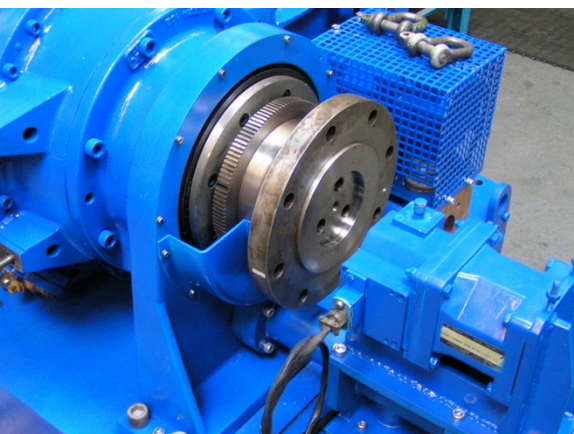

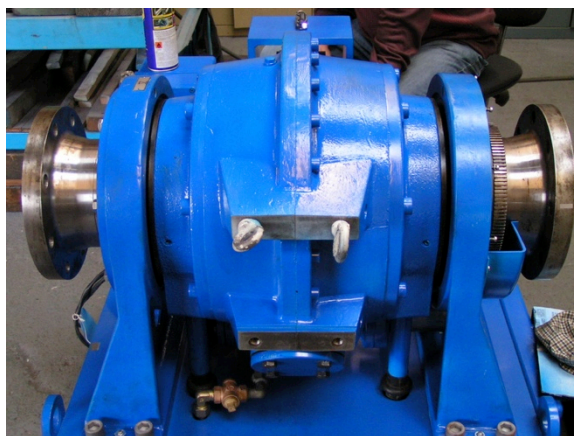

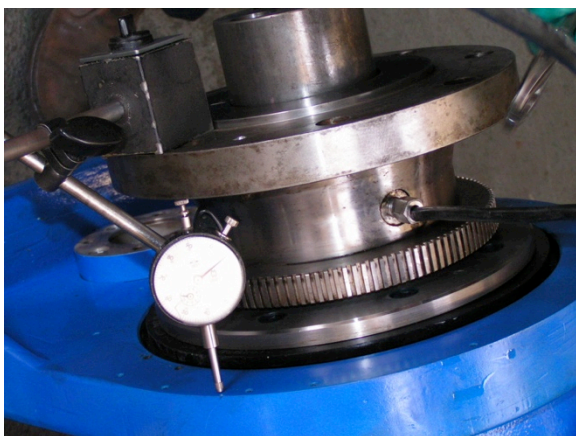

The device was completely dismantled into the individual component parts and all main body parts were thoroughly cleaned, inspected for damage and correct measurement.

As illustrated above, all bearings, seals and gaskets were replaced. The shaft and rotor assembly has been balanced and the control valves have been rebuilt.

The customer will receive a copy of the pass off results with the rebuilt machine.

This dynamometer has been rebuilt to the highest standard and is fully warranted against faulty parts or workmanship.

Best wishes

Rob Ellis
